WHAT IS INCA GLOW

Over 20 years in the making, Inca Glow™ is the first smoothing system of its kind and is already revolutionizing the professional beauty industry. Formulated with all natural, organic ingredients, Inca Glow contains 11 amino acids and ZERO harsh chemicals. Inca Glow will not burn or irritate the scalp, has no offensive odor and is 100% safe for use on all hair types. Why wait for a better smoothing system, BETTER is here.

Features & Benefits

Inca Oil

An ORGANIC oil extracted from the seed of the Inca plant, is rich in Omega 3, 6 & 9, vitamins A C & E and saturated fats. Inca Oil provides the ionic chemistry that allows Inca Glow to TAME, TREAT and TONE the hair all in one system.

Non-Keratin System

Inca Glow uses an Amino Acid Complex that allows the product to provide long lasting anti-frizz effect while smoothing and adding shine without the drying and damage sometimes associated with Keratin Straighteners.

Safe and Gentle

ABSOLUTELY No Formaldehyde or Formaldehyde substitutes which means no harsh odors, no burning eyes and absolutely NO health risks. No large protein molecules means no need for ammonia or ammonia like chemicals that dry the hair.

INCA GLOW AND THE HAIR

Side-Bonds and Inca Glow

Inca Glow is the first to market hair smoothing system that contains 11 organic amino acid and that is formulated with natural & organic ingredients. It does not contain Formaldehyde, smell or odor, it does not burn or irritate the scalp and it's 100% safe for all hair types, clients and professionals! LePlatt Cosmetique manufacturing has been a leader in Brazil for over 30 years with a state of the art manufacturing facility of over 30,000 square feet. Inca Glow is one of the newest revolutionary products created.

3

	STEP 1	STEP 2	STEP 3	STEP 4	
HAIR TYPE	Cleanse the hair 1 - 2 times using pre glow clarifying shampoo to eliminate any build-up on the hair prior to Inca Glow application	Dry the hair approximately 50%- 80%. Apply the recommended mixture of Inca Glow (see Hair Type for mixture recommendations) ¼" from the scalp through to the ends or to the previously lightened/damaged point of the hair.	After processing time in complete, rinse the hair to remove the proper amount of Inca Glow prior to Step 4. Refer to Hair Type to determine how much of the product to rinse for the hair. Blow dry hair 100%	Pass a flat iron (set at the recommended temperature determined by Hair Type) rapidly over 1/8 to 1/4 partings of the hair to seal the cuticle of the hair. When you see shine you are sealed.	
	RECOMMENDED SHAMPOO TYPE	INCA GLOW MIXTURE	PROCESSING TIME	RINSE PERCENTAGE	IRON TEMPERATURE GUIDELINE
Virgin	Clarifying Shampoo	Equal parts platinum and regular formula	45 - 60 minutes	Rinse only until color begins to dilute and fade, leaving approximately 20% in the hair.	400 - 450 degrees
Virgin Resistant	Clarifying Shampoo	Equal parts platinum and regular formula	Up to 80 minutes	Rinse only until color begins to dilute and fade, leaving approximately 80% in the hair.	400 - 450 degrees
Previously Colored/ Treated	Clarifying Shampoo	Equal parts platinum and regular formula	30 - 60 minutes	Rinse product until water runs 100% clear from the hair.	350 - 450 degrees
Prelightened/ Damaged	Clarifying Shampoo For extremely damaged hair, a hydrating treatment is recommended prior to performing a Inca Glow Service.	Equal parts platinum and regular formula you may add more platinum to cool or less to create warmth	Apply 1/4 inch from the scalp to point of previous damage, process 15 minutes. Bring remaining product through the ends, process additional 15minutes	Rinse product until water runs 100% clear from the hair.	350 - 375 degrees

NOTE: For previously color treated and damaged hair; Set flat iron heat 10 degrees lower than recommended to begin. Turn heat up 10 degrees at a time if needed until you see shine.

INCA GLOW

FAQ SHEET

- **Is Inca Glow a Keratin Smoothing Treatment?**

No. Inca Glow is a Non-Keratin smoothing system that uses an Amino acid Complex that allows the product to provide long lasting anti-frizz effect along with smoothing and shine. Keratin treatments may have challenges fighting frizz as it is a large molecule that can be drying.

- **What are the active ingredients in Inca Glow?**

Inca Oil, Glycolic acid, Lactic acid and other amino acids complete the all-natural formula.

- **How long does Inca Glow last?**

Inca Glow lasts between 12 and 16 weeks depending on lifestyle and maintenance.

- **What is the difference between the Inca Glow and Inca Glow Platinum?**

Both products have the same natural organic formula with the addition is violet pigment added the Inca Glow Platinum to tone unwanted warmth in yellowing blonde hair.

- **Can a Inca Glow Service be performed on hair that has already been chemically treated?**

Yes. Inca Glow is not only safe to use over previous chemical services. In fact, Inca Glow can help to replenish & nourish hair that has been previously damaged.
